This 16 hour course focuses on risk management in all types of emergency response. Using a risk assessment process focused on reducing the probability that responders are exposed to high severity hazards. Instructors will discuss both strategic and operational risks and how decision making influences risk sharing. This interdisciplinary class will cover the Deliberate Risk Assessment Process and show students how to apply the process for the following types of emergency incidents: structure fires, wildland fires, urban search & rescue (USAR), technical rescue, hazardous materials, and other all hazard events. Personnel at all experience levels will benefit from completing this course. The training will lay a foundation of knowledge for personnel who wish to serve as an NWCG Line Safety Officer or Incident Safety Officer. In addition, operational personnel at all levels will find the course helpful in their jobs.

The highly interactive course will utilize facilitated discussion and group exercises.
